RE: Connecting Iumen PIDbox technology to systems with Jinko Solar PV Modules

We, Jinko Solar Co., Ltd (Jinko Solar), herewith confirm that applying a voltage of 1000V (on the cells against the frame at ground potential) on modules with a limited leakage current, not exceeding 16 mA, for a maximum daily duration of 8 hours, over the entire duration of the limited product warranty of the modules, during a non-operational time (at night), does not violate the terms and conditions stipulated in the Jinko module warranty. This authorization relies on preliminary test results and observations from plants, where such technology has been applied, without noticeable effects on the modules so far.

However, Any damages or losses arising or resulting from a device malfunction, misuse or material defect of the (PIDbox) device or lack of maintenance is explicitly excluded from Jinko Solar's module warranty. Please notify your customer accordingly, that the device warranty is ruled by Iumen's terms and conditions

Jinko Solar reserves the right, to resign this approval at any time and with immediate effect, if the technology or device proves disadvantageous properties for the module or the system.

Kind regards,
